

Section 1: Pricing, Contracts & Financial Models

Q1. Client says "Your pricing is significantly higher than other agencies or freelancers."

Context / Rationale

Freelancers ya low-cost agencies aksar testing, code architecture, security protocols, aur documentation ko miss kar deti hain, jis se baad mein costly code rewrite karna padta hai. Humari pricing production-ready code aur complete end-to-end responsibility ki wajah se hai.

Exact Strategy / Pitch

"Humari pricing end-to-end software engineering, production-grade security, testing, aur dedicated project management ko cover karti hai. Low-cost alternatives aksar foundational practices miss kar dete hain jis se aage chal kar technical debt aur security risks hote hain. Hum aapko ek scalable, ready-to-scale system dete hain jisme long-term maintenance support shaamil hota hai."

Q2. Client asks Can we get a discount or lower the overall estimate for this project?

Context / Rationale

Direct discount dene se developers ki rate aur work quality compromise hoti hai. Best approach yeh hoti hai ke initial scope (MVP) ko chota kiya jaye.

Exact Strategy / Pitch

Hum quality par compromise nahi karte is liye rates discount nahi karte, lekin hum project scope ko aapke target budget ke mutabiq adjust kar sakte hain. Hum Phase 1 mein sirf Core MVP features build karenge aur secondary features ko Phase 2 ke liye defer kar denge, jisse aapka initial investment kam ho jayega.

Q3. Client asks "What payment milestones and schedule do you follow?"

Context / Rationale

Financial risk ko balance karne ke liye milestone-based billing model follow kiya jata hai jo clear deliverables se link hota hai.

Exact Strategy / Pitch

Hum deliverables-based payment schedule follow karte hain: 30% upfront deposit (project setup & architecture), 30% mid-project milestone (core API & backend), 30% UAT (User Acceptance Testing phase), aur final 10% production release aur complete code handoff par.

Q4. Client asks "Will we be billed extra if the project timeline exceeds the estimated schedule?"

Context / Rationale

Fixed-price projects mein agency delay ki wajah se client ko extra pay nahi karna padta. Extra cost sirf tab hoti hai jab client scope change kare.

Exact Strategy / Pitch

"Nahi, fixed-scope contracts mein humari internal delay ki wajah se koi extra charges nahi hote. Extra cost sirf tab apply hoti hai jab aap initial SOW ke bahar koi naya feature request karein ya feedback loop mein delay ho."

Q5. Client asks "Why should we choose a Fixed Price contract over Time & Material (Hourly)?"

Context / Rationale

Client ko dono models ki suitability batani hoti hai taake wo apne business model ke hisab se choose kar sake.

Exact Strategy / Pitch

"Fixed Price model tab best hai jab requirements 100% clear aur defined hon, kyun ke isme budget predict ho jata hai. Time & Material (T&M) tab better hai jab product evolve ho raha ho aur aapko continuous scope changes aur flexibility chahiye ho."

Q6. Client asks "What is included in the initial upfront deposit?"

Context / Rationale

Upfront deposit lene ka maqsad dedicated team reserve karna aur foundational architecture setup karna hota hai.

Exact Strategy / Pitch

"Upfront deposit se hum aapke project ke liye developers allocate karte hain, system architecture design karte hain, database schemas aur UI/UX wireframes banate hain, aur dev environments ready karte hain."

Q7. Client asks "How do you handle unexpected technical complexities that increase development hours?"

Context / Rationale

Complexities ko handle karna agency ki responsibility hoti hai jab tak scope na badle.

Exact Strategy / Pitch

"Fixed-price contracts mein unexpected technical hurdles ko humari engineering team agreed budget ke andar hi absorb karti hai. Agar complexity ki wajah se core feature redefine karna pade, toh hum transparently discussion karke formal Change Order issue karte hain."

Q8. Client asks "Do you offer flexible billing options for early-stage startups?"

Context / Rationale

Startups ke pass limited cash flow hota hai, is liye unhe phased rollouts suggest kiye jate hain.

Exact Strategy / Pitch

"Haan, startups ke liye hum phased milestone rollouts offer karte hain taake aapka cost structure aapke fundraising ya revenue milestones ke sath align ho sakay."

Q9. Client asks "What currency and payment methods do you accept?"

Context / Rationale

Payment process ki transparency clear ki jati hai.

Exact Strategy / Pitch

"Hum Wire Transfer (ACH/SWIFT), Wise, aur Payoneer accept karte hain in USD, EUR, aur GBP. Standard terms Net-15 invoices par hote hain."

Q10. Client asks "Are server costs, API subscription fees, and third-party tools included in the development quote?"

Context / Rationale

Development fees aur third-party infrastructure fees ko alag rakhna mandatory hota hai ownership ke liye.

Exact Strategy / Pitch

"Development quote mein humari engineering aur architecture services include hoti hain. Third-party infrastructure costs (jaise AWS hosting, OpenAI/Gemini APIs) direct aapke corporate accounts par bill hote hain taake billing aur complete asset ownership aapke pass rahe."

Section 2: Technical Stack, AI Infrastructure & Architecture

Q11. Client asks "Why are you recommending Laravel/Node.js/Python over our preferred technology stack?"

Context / Rationale

Tech stack selection client ki requirement (real-time performance, ecosystem, scalability) ke base par hoti hai.

Exact Strategy / Pitch

"Hum tech stack choose karte waqt performance, ecosystem, aur maintainability ko dekhte hain. Node.js real-time apps ke liye, Laravel structured web backend ke liye, aur Python AI/ML for RAG processing ke liye ideal hai. Agar aapka legacy stack maintain karna priority hai, toh hum us par bhi shift ho sakte hain."

Q12. Client asks "How do you guarantee data privacy and prevent leakages in AI/LLM applications?"

Context / Rationale

Enterprise client ka sab se bada concern unka data leak hona hota hai.

Exact Strategy / Pitch

"Hum zero-data-retention enterprise APIs ya local self-hosted LLMs deployment model use karte hain. Databases AES-256 encrypted hoti hain. Aapka proprietary data kabhi bhi public models ko train karne ke liye send nahi hota."

Q13. Client asks "How do you mitigate AI hallucinations and ensure accurate responses?"

Context / Rationale

Direct LLM hallucinations se bachne ke liye RAG + System Guardrails ka reference diya jata hai.

Exact Strategy / Pitch

"Hum Retrieval-Augmented Generation (RAG) pipelines use karte hain jisme strict guardrails hote hain. LLM sirf aapke internal verified vector database aur documents se facts dhoond kar answer generate karta hai, aur har answer ke sath citation source deta hai."

Q14. Client asks "Can your architecture support high concurrent traffic and scale automatically?"

Context / Rationale

High traffic handle karne ke liye containerized aur microservices approach explain karni hoti hai.

Exact Strategy / Pitch

"Haan, hum Docker/Kubernetes containers, Redis caching layers, asynchronous task queues, aur cloud auto-scaling setup karte hain jo spike aane par system ko automatically expand kar deta hai."

Q15. Client asks "Do you build custom AI models or fine-tune existing open-source models?"

Context / Rationale

Fine-tuning vs RAG decision use-case aur budget par depend karti hai.

Exact Strategy / Pitch

"Standard tasks ke liye hum RAG over pre-trained models (Llama 3 / Gemini) choose karte hain kyun ke yeh fast aur accurate hai. High domain-specific tasks ke liye hum Llama 3 / Mistral ko PEFT/LoRA techniques se aapke custom dataset par fine-tune karte hain."

Q16. Client asks "How do you manage database backups, redundancy, and disaster recovery?"

Context / Rationale

Data loss protection setup explain karna hota hai.

Exact Strategy / Pitch

"Hum daily automated encrypted database snapshots, Point-In-Time Recovery (PITR), aur multi-region replication configure karte hain taake system outage ke dauran zero data loss ho."

Q17. Client asks "How do you ensure API security and prevent unauthorized access?"

Context / Rationale

OWASP standards ke mutabiq security setup batani hai.

Exact Strategy / Pitch

"Tamam APIs OAuth 2.0 / JWT tokens, Role-Based Access Control (RBAC), Rate-Limiting middleware, aur strict input validation se secure ki jati hain taake SQL injection aur XSS attack na ho sakay."

Q18. Client asks "Can you integrate our legacy backend systems with modern cloud services?"

Context / Rationale

Old code base ke upar modern REST/GraphQL APIs ka wrapper build karna.

Exact Strategy / Pitch

"Haan, hum legacy systems ke gird secure REST/GraphQL wrapper APIs aur middleware layers build karte hain jo aapke existing backend ko modern cloud, web apps, aur AI tools se sync kar deti hain."

Q19. Client asks "What vector database do you recommend for RAG architectures and why?"

Context / Rationale

Vector DB setup size aur performance requirement par depend karta hai.

Exact Strategy / Pitch

"Lightweight / self-hosted systems ke liye hum PostgreSQL with pgvector ya ChromaDB use karte hain. Enterprise-scale real-time search ke liye Pinecone, Qdrant, ya Milvus use karte hain."

Q20. Client asks "How do you handle real-time speech-to-text (STT) and text-to-speech (TTS) latency?"

Context / Rationale

Audio latency kam karne ke liye WebSockets + Streaming APIs ka use.

Exact Strategy / Pitch

"Hum Deepgram Nova-2 aur ElevenLabs ki streaming APIs ko WebSockets ke zariye connect karte hain. Audio stream chunks mein process hoti hai jis se total processing latency 500ms se kam rehti hai."

Section 3: Project Delivery, Timeline & Scope Management

Q21. Client says "We need this project completed in half the estimated schedule."

Context / Rationale

Timeline fast karne se quality drop nahi honi chahiye, is liye parallel resources ya MVP focus ka option diya jata hai.

Exact Strategy / Pitch

"Timeline compress karne ke do safe tarike hain: Ya toh hum dedicated developers badha kar parallel engineering karein, ya fir pehle launch ke liye core MVP features launch karein aur baaki features fast follow-up releases mein dein."

Q22. Client asks "How do you handle scope changes or new feature requests"

mid-project?"

Context / Rationale

Unplanned work se timeline delay hoti hai, is liye structured Change Order process batayein.

Exact Strategy / Pitch

"Hum formal Change Request (CR) process follow karte hain. Naye requirement aane par architect timeline aur cost impact evaluate karta hai aur aapki written approval ke baad usko agle sprint cycle mein integrate kiya jata hai."

Q23. Client asks "How frequently will we receive project progress updates?"

Context / Rationale

Transparency buildup ke liye regular demos aur tracking access dena.

Exact Strategy / Pitch

"Aapko weekly live sprint demos, bi-weekly progress reports, Slack/Teams par instant updates, aur Jira/Trello board par real-time task status milta rahega."

Q24. Client asks "What happens if a milestone is rejected during User Acceptance Testing (UAT)?"

Context / Rationale

Rejection resolution procedure explain karna.

Exact Strategy / Pitch

"UAT ke dauran agar koi deliverable agreed spec ke mutabiq na ho, toh use high-priority bug treat karke hum bina kisi extra cost ke fix karte hain jab tak sign-off na mil jaye."

Q25. Client asks "How do you estimate development time for complex software modules?"

Context / Rationale

Accurate estimation logic breakdown.

Exact Strategy / Pitch

"Hum features ko discrete user stories mein break karte hain, historical velocity ke mutabiq story points assign karte hain, aur third-party integrations ke liye risk buffers include karke timeline estimate karte hain."

Q26. Client asks "What development methodology do you follow?"

Context / Rationale

Agile-Scrum framework.

Exact Strategy / Pitch

"Hum 2-week sprint cycles wala Agile-Scrum framework follow karte hain, jisse continuous working software test karne ko milta rehta hai aur quick adjustments easy hoti hain."

Q27. Client asks "What is required from our internal team during the project lifecycle?"

Context / Rationale

Client participation expectations.

Exact Strategy / Pitch

"Aapki taraf se ek Product Owner chahiye jo requirement clarifications, weekly sprint demos attend karne, aur UAT sign-offs fast time par de sakay."

Q28. Client asks "How do you prevent project scope creep from delaying milestones?"

Context / Rationale

Scope creep protection logic.

Exact Strategy / Pitch

"Hum SOW document ko baseline banate hain. Agreed scope ke alawa koi bhi naye additions ko backlog mein daal diya jata hai taake active milestone deliverable delay na ho."

Q29. Client asks "Can we add more developers to an ongoing sprint to speed up execution?"

Context / Rationale

Mid-sprint resource adding issues.

Exact Strategy / Pitch

"Sprint ke beech mein naye devs lane se onboarding delay hota hai. Best practice yeh hai ke hum next sprint start hote hi team size expand karein."

Q30. Client asks "What is your protocol if a key developer working on our project resigns or falls ill?"

Context / Rationale

Continuity planning & documentation.

Exact Strategy / Pitch

"Hum detailed code documentation, pair programming, aur shadow developers maintain karte hain, taake developer switch hone par 48 hours ke andar bina loss of context ke naya developer work start kar le."

Section 4: IP Rights, Code Ownership & Legal Agreements

Q31. Client asks "Who owns the intellectual property (IP) and source code upon project completion?"

Context / Rationale

100% Code ownership agreement.

Exact Strategy / Pitch

"Full invoice payment ke baad, 100% custom source code, IP rights, database schemas, aur designs exclusively aapki company ki ownership ban jaate hain."

Q32. Client asks "Are you willing to sign our custom Non-Disclosure Agreement (NDA) before sharing project details?"

Context / Rationale

Legal protection & secrecy.

Exact Strategy / Pitch

"Bilkul, hum project details, logic, ya system assets discuss karne se pehle mutual NDA sign karte hain."

Q33. Client asks "Can we perform an independent third-party code audit before final sign-off?"

Context / Rationale

Code quality confirmation.

Exact Strategy / Pitch

"Haan, hum third-party security aur code audits ko encourage karte hain aur deployment se pehle unke feedback ko execute karte hain."

Q34. Client asks "Do you use open-source software (OSS) that could compromise our commercial IP rights?"

Context / Rationale

Open source licensing safety.

Exact Strategy / Pitch

"Hum sirf permissive licenses (MIT, Apache 2.0) use karte hain aur strict copyleft licenses (GPL/AGPL) se bachte hain taake aapka commercial code secure rahe."

Q35. Client asks "How are custom trade secrets and business algorithms protected during development?"

Context / Rationale

Developer level security protocols.

Exact Strategy / Pitch

"Legal NDAs ke alawa, developers ko Role-Based Access, 2FA, isolated private repositories, aur encrypted environments ke zariye control kiya jata hai."

Q36. Client asks "Where will our source code be stored during the development phase?"

Context / Rationale

Code storage transparency.

Exact Strategy / Pitch

"Aapka source code private GitHub/GitLab repositories par store hota hai jisme restricted team access aur branch protection rules setup hotay hain."

Q37. Client asks "What jurisdiction and governing laws apply to our service contract?"

Context / Rationale

Legal framework.

Exact Strategy / Pitch

"Humare standard contracts international commercial laws par act karte hain, ya hum mutual review ke dauran aapki preferred legal jurisdiction par agree kar sakte hain."

Q38. Client asks "Do you reuse code from previous client projects?"

Context / Rationale

Proprietary code reuse guarantee.

Exact Strategy / Pitch

"Nahi, hum kisi doosre client ka proprietary code reuse nahi karte. Sirf internal open-source boilerplates aur utility libraries use karte hain setup fast karne ke liye."

Q39. Client asks "What non-compete commitments do you provide?"

Context / Rationale

Non-compete trust.

Exact Strategy / Pitch

"Hum contracts mein Non-Compete clause include karte hain ke hum contract duration mein aapka direct clone product build nahi karenge."

Q40. Client asks "Who retains ownership of the training datasets used to train our AI models?"

Context / Rationale

AI Data Ownership.

Exact Strategy / Pitch

"Aapke saare raw, cleaned, aur fine-tuning datasets par 100% ownership aapki rehti hai. Project end hone par hum complete data handed over kar ke local system se wipe kar dete hain."

Section 5: Quality Assurance, Security & Performance Testing

Q41. Client asks "What testing procedures do you execute before releasing software to production?"

Context / Rationale

Comprehensive QA lifecycle.

Exact Strategy / Pitch

"Hum Unit Testing, API Integration Testing, End-to-End (E2E) UI Testing, Cross-Browser Compatibility, aur Load Stress Testing execute karne ke baad hi release karte hain."

Q42. Client asks "How do you handle vulnerability testing and OWASP compliance?"

Context / Rationale

Application Security.

Exact Strategy / Pitch

"Hum SAST (Static Code Scanning) aur OWASP Top 10 guidelines enforce karte hain taake SQL Injection, XSS, aur CSRF vulnerabilities na aayein."

Q43. Client asks "How do you ensure application UI responsiveness across mobile and desktop devices?"

Context / Rationale

Responsive UX.

Exact Strategy / Pitch

"Hum Mobile-First design approach aur BrowserStack par physical device testing ke zariye har screensize par smooth rendering check karte hain."

Q44. Client asks "What performance load metrics do you guarantee for web applications?"

Context / Rationale

Speed benchmarks.

Exact Strategy / Pitch

"Hum sub-2-second page load times aur under 200ms API response time target karte hain aur release se pehle JMeter/K6 se load test verify karte hain."

Q45. Client asks "How do you manage bug tracking and defect prioritization during UAT?"

Context / Rationale

Bug handling protocol.

Exact Strategy / Pitch

"Bugs ko Jira par Critical, Major, Minor categories mein log karte hain. Critical workflows stop karne wale bugs ko immediate hotfix release diya jata hai."

Q46. Client asks "Do you provide automated test scripts that our team can run later?"

Context / Rationale

Automated QA Handoff.

Exact Strategy / Pitch

"Haan, Jest, PyTest, ya Cypress ke automated test suites aapke code repository mein include kar ke diye jaate hain."

Q47. Client asks "How do you ensure code maintainability and readability for future developers?"

Context / Rationale

Clean Code Culture.

Exact Strategy / Pitch

"Hum Strict Linting, TypeScript/Type Hints, Prettier code formatting, modular design, aur inline documentation strictly follow karte hain."

Q48. Client asks "What continuous integration and deployment (CI/CD) practices do you set up?"

Context / Rationale

CI/CD Automation.

Exact Strategy / Pitch

"Hum GitHub Actions / GitLab CI workflows configure karte hain jo automated testing ke baad verified code ko staging/production par auto-deploy kar dete hain."

Q49. Client asks "How do you conduct accessibility (WCAG) testing?"

Context / Rationale

Accessibility compliance.

Exact Strategy / Pitch

"Hum Lighthouse aur axe-core tools se WCAG 2.1 AA accessibility standards check karke design optimize karte hain."

Q50. Client asks "What environment isolation protocols do you maintain?"

Context / Rationale

Dev/Staging/Prod separation.

Exact Strategy / Pitch

"Hum Dev, Staging, aur Production environments ko isolated rakhte hain. Live production data kabhi bhi local development machine par copy nahi kiya jata."

Section 6: Team Structure, Onboarding & Communication

Q51. Client asks "Who will be assigned to our project team?"

Context / Rationale

Team composition transparency.

Exact Strategy / Pitch

"Aapki dedicated team mein Technical Project Manager, Lead Systems Architect, Senior Full-Stack Engineers, QA Specialist, aur DevOps Engineer shaamil hotay hain."

Q52. Client asks "Can we interview developers before they are assigned to our project?"

Context / Rationale

Client Confidence building.

Exact Strategy / Pitch

"Bilkul, hum developer CVs, GitHub repositories, aur past case studies share karte hain aur aap technical screening interview arrange kar sakte hain."

Q53. Client asks "How do you manage time zone differences for international clients?"

Context / Rationale

Overlap hours assurance.

Exact Strategy / Pitch

"Hum daily 3 se 4 hours ka guaranteed live overlap timing set karte hain daily standups aur discussions ke liye, jabke baaki updates asynchronous Slack channel par di jaati hain."

Q54. Client asks "What project management tools and communication channels do you use?"

Context / Rationale

Tooling alignment.

Exact Strategy / Pitch

"Hum Slack/Teams chat ke liye, Jira/Linear task management ke liye, aur GitHub/GitLab code sync ke liye use karte hain."

Q55. Client asks "Can our internal technical team collaborate directly with your developers?"

Context / Rationale

Staff augmentation setup.

Exact Strategy / Pitch

"Haan, hum Hybrid Model support karte hain jahan humare engineers aapke internal dev team ke sath same repo aur daily standup par work karte hain."

Q56. Client asks "What language proficiency do your engineers maintain?"

Context / Rationale

Fluent communication.

Exact Strategy / Pitch

"Humare leads aur senior engineers professional English fluent hain jo complex technical details clearly document aur present kar sakte hain."

Q57. Client asks "How do you handle developer offboarding or reassignments without disrupting velocity?"

Context / Rationale

Resource Transition.

Exact Strategy / Pitch

"Hum standard architecture documentation aur shadow engineers maintain karte hain jis se resource change hone par 48 hours mein handover complete ho jata hai."

Q58. Client asks "How do you track and log billable development hours?"

Context / Rationale

Transparent time tracking.

Exact Strategy / Pitch

"Hourly billing ke liye developers Clockify/Hubstaff tracker use karte hain aur har task ko Jira ticket ID ke sath map karke detailed report dete hain."

Q59. Client asks "What is the escalation path if we are dissatisfied with a project deliverable?"

Context / Rationale

Management Escalation.

Exact Strategy / Pitch

"Aap direct VP of Engineering se contact kar sakte hain. Escalation milne par 24 hours ke andar audit karke remediation action plan diya jata hai."

Q60. Client asks "Do you provide technical documentation and system guides upon handoff?"

Context / Rationale

Documentation handoff deliverables.

Exact Strategy / Pitch

"Haan, complete deliverable mein Swagger API docs, Database ERD diagrams, System Architecture maps, aur Deployment Runbooks milte hain."

Section 7: Post-Launch Support, Maintenance & SLAs

Q61. Client asks "What support warranty do you offer after the application goes live?"

Context / Rationale

Post-release Warranty.

Exact Strategy / Pitch

"Hum launch ke baad 30 days ki free warranty dete hain jisme specification deviations aur bugs fix kiye jaate hain."

Q62. Client asks "What is included in your monthly Service Level Agreement (SLA) maintenance plans?"

Context / Rationale

Maintenance retainer scope.

Exact Strategy / Pitch

"SLA plans mein 24/7 uptime monitoring, security patches update, daily backup verification, proactive error tracking (Sentry), aur developer support hours shaamil hotay hain."

Q63. Client asks "What are your guaranteed response times for critical application outages?"

Context / Rationale

SLA Response Timings.

Exact Strategy / Pitch

"Critical Outage (P1) ke liye humara SLA guaranteed initial response time 15-30 minutes ka hai jab tak application operational state mein na aa jaye."

Q64. Client asks "How do you handle minor feature enhancements after project deployment?"

Context / Rationale

Post-launch updates.

Exact Strategy / Pitch

"Minor features ya toh aapke monthly SLA maintenance hours se adjust kar liye jaate hain ya ad-hoc mini-sprint ke tor par quote kiye jaate hain."

Q65. Client asks "Will our team be trained on how to manage the system back-office?"

Context / Rationale

Team Onboarding.

Exact Strategy / Pitch

"Haan, hum aapki admin team ke liye live training sessions conduct karte hain aur recorded video walkthroughs aur Admin Manuals provide karte hain."

Q66. Client asks "How do you monitor application health and performance in real time?"

Context / Rationale

Proactive Monitoring.

Exact Strategy / Pitch

"Hum Datadog, Grafana, aur Sentry integrated server setups use karte hain jo critical errors and traffic anomalies ko real-time detect karke alerts trigger karte hain."

Q67. Client asks "What happens when third-party APIs integrated into our application update or break?"

Context / Rationale

Deprecation management.

Exact Strategy / Pitch

"Hum maintenance SLA mein API version monitoring include karte hain taake endpoint deprecate hone se pehle hi integration upgrade kar di jaye."

Q68. Client asks "Do you handle domain migration, DNS configuration, and SSL deployment?"

Context / Rationale

Production Launch services.

Exact Strategy / Pitch

"Haan, humari DevOps team complete deployment handle karti hai jisme DNS routing, SSL certificates (Let's Encrypt / AWS ACM), aur CDN (Cloudflare) setup Shaamil hota hai."

Q69. Client asks "Can we transition to an in-house team after 6 months of agency maintenance?"

Context / Rationale

Handover to internal team.

Exact Strategy / Pitch

"Bilkul, hum in-house team transitions ko fully support karte hain aur architectural walkthroughs aur complete technical handovers conduct karte hain."

Q70. Client asks "Why should we choose your agency over hiring an in-house engineering team?"

Context / Rationale

Agency vs In-house value proposition.

Exact Strategy / Pitch

"In-house team hiring mein months lagte hain, recruitment overheads aur fixed salaries ki commitments hoti hain. Hum aapko instant, battle-tested multi-domain team (DevOps, AI, Full-Stack, QA) ek fraction of cost par flexible scaling ke sath provide karte hain."
